Mujeeba Zainab Khan **Trainee Programmer**

Brief Description of Project:

This project aims to provide software for cab booking system that maintains the information about the customer details, driver details and booking details. You can register on our software and can book a cab for yourself.

It is a web-based platform that allow customers to book their taxis all online from the comfort of their own home or office. More and more taxi companies are looking for integrated taxi booking systems as it makes life much easier for (1) The traveller - this is highly important and in today's era people should be able to book taxis online without any hustle and (2) the taxi company- as all their bookings are now managed via an automated system which means they have an electronic record of future and historic bookings.

The project has been engraved with JWT authentication, thereby making it very secure and authentic to use.

Contributions:

- Gathering the requirements from internal trainer.
- Lead the meetings to understand and manage the flow of project.
- Developing backend applications in java spring Boot.
- Implementing security handling components as per the requirement.
- Writing React-Redux Code for connecting backend and front-end.
- Deploying applications in environments like java spring boot and react redux.
- Working with REST Services.
